

WHAT WE DO

Buchanan & Edwards is an Information Technology and Professional Services Company providing solutions to the public sector.

We base our solutions on our in-depth understanding of our clients and the unique challenges they face. We bring all of the experience, creativity, and intellectual capital of a large IT services firm and combine it with advantages of an agile, small business that takes a personal interest to client success.

B&E was founded in 1998 and is a veteran-owned 8(a) company. We employ a disciplined management approach that has been independently appraised as compliant with CMMI Level 2 processes and ISO 9001:2008 standards.

B&E: Connecting you to your world.

Solutions that Drive Client Productivity, Profitability, & Success.

B&E Solution Case Studies: Client Success

Data Strategies & Business Intelligence

DoJ - FBI: Investigative Data Warehouse

B&E served as the lead data architect for the FBI's IDW, an intelligence analysis platform which now serves as the sole information repository for data. Prior to IDW, a lack of integration between systems, made it difficult to obtain consistent, reliable information.

B&E developed the IDW paying special attention to data quality, technical documentation & the FBI's unique security needs. Due to the efforts of B&E, the IDW has enabled people across the Bureau to access the accurate information they need faster; aiding the FBI with their mission of preventing terrorist attacks.

Advanced Infrastructure Solutions

DoS - Bureau of African Affairs: IT Support & Network Engineering

The B&E team at the African Bureau supports 400+ users domestically as well as 50 DoS overseas posts. Their efforts through technical help desk, network design & logistics support has enabled our Foreign Service Officials to access the IT they need in the most remote of locations.

Custom Application Development

EPA - Office of HR: PeopleSoft Support

B&E provided support to the EPA-OHR for the maintenance and enhancement of PeoplePlus, a PeopleSoft Human Capital Management System. The EPA-OHR had formerly been using an outdated financial system, hampering day to day operations. B&E enhanced and added new components to PeopleSoft workflow & standard reports to reflect the revised payroll interface data. Now the right information easier and quicker. This implementation of the DFAS requirement has improved the quality & morale of the 18,000 user community.

Business Process Outsourcing

DoS - Foreign Service Institute: Staff Support

In response to FSI's recruiting problem, B&E's recruiting department provided FSI with professionals specializing in Administrative Support, Technical Writing, & Systems Analysis. In addition, B&E provided FSI with a BO web-based reporting system that empowers users to organize work & analyze trends. Today, the FSI managers rely on B&E to contribute to the ongoing training & professional development of foreign service officers.
