

ADVANCED INFRASTRUCTURE SOLUTIONS

Organizations today realize the importance of a robust and flexible network infrastructure that enables high performance and operational success. It's not easy managing an infrastructure with high support costs, limited technology resources, and countless security threats. That's why B&E offers a range of infrastructure solutions which provide complete life-cycle support for your information technology environment.

Whether you need a new network, or want to optimize or expand a network that you have, B&E offers experienced subject matter experts with best practices methodology to assist you in reaching your productivity, performance, and security goals. Our professionals can help you in choose the right hardware, create an effective architecture, and implement the best operational plan to suit your specific needs, while meeting regulatory requirements and budgetary guidelines.

We supply the people, processes, tools and technology to assure you an effective, reliable, flexible and secure network environment that supports your business needs. It's crucial for all systems to have a design capable of supporting both current needs and future growth. So we take the time to ensure that all of our Advanced Infrastructure Solutions are developed to be flexible, scalable network environments.

Reliable operation of the enterprise network is no longer just a business utility — it has become a necessity for survival.

DoS - African Bureau: IT Support & Network Engineering

The B&E team at the African Bureau supports 400+ users domestically as well as 50 DoS overseas posts. Their efforts through technical help desk, network design, & logistics support has enabled our Foreign Service Officials to access the information & technology they need in the most remote of locations.

The disparate infrastructure across overseas posts has required B&E to provide a more sophisticated and creative support capability to African Bureau. For example, B&E has provided "Fly Away Kits" for remote sites in Africa, which include R-BGAN devices, satellite phones, laptops, GPS devices, VSAT's, & more. The "Fly Away Kit" is carefully planned out because it has to include everything the field technician needs without wasting budgets by providing unnecessary items.

AFFILIATIONS

B&E has formed partnerships and affiliations with some of the most successful companies in the industry. These include:

Industry

- » Microsoft
- » Oracle
- » Endeca
- » PeopleSoft
- » Informatica
- » Business Objects
- » Cisco

Contract Partnerships

- » Bearing Point
- » Booze Allen Hamilton
- » Idea Integration
