

DATA STRATEGIES & BUSINESS INTELLIGENCE

Today's fast-paced marketplace requires professionals to make decisions with razor sharp precision. A single misstep could make a measurable difference in your overall performance, weakening your competitive positioning. Surviving in the Age of Information requires highly accurate information to be readily available throughout your organization. That's where B&E's BI solutions come in.

B&E's BI solutions help our clients harness the true power of their information systems by transforming unmanageable data into meaningful, actionable information. By making it easier to access, extract, and analyze business data, B&E's BI solutions enable managers to make strategic decisions and create a more efficient organization. Our methodology enhances visibility across the organization, helping you to gain a comprehensive understanding of your operational performance. BI enables an optimized operational readiness that lets you proactively respond to future opportunities, increase cost efficiencies and prevent disasters before they occur.

B&E'S DATA STRATEGIES & BI PRACTICE AREAS

BI Blueprint

Provides a common vision for building the target operating model. This includes defining the Scope of Work and Evaluation and Selection of your BI Tool Set. A thorough planning and scope effort assures a rapid ROI and that all business needs are met in a timely fashion.

Dashboards, Scorecards, KPI's

Our Performance measurement and metrics solutions allow clients to integrate data-driven decision making as part of their core business. Dashboards, Scorecards, and KPI's help clients identify and align performance metrics to their overall organizational strategy.

Business Intelligence

Our Mission: Improve Government's Performance and Productivity

Data Warehouse Implementation

B&E Professionals are experienced in all aspects of the implementation of data warehouse architecture and related databases. B&E designs and deploys data models and Extraction, Transformation, and Load (ETL) processes which provide a solid, yet flexible foundation for acquiring and leveraging data assets. This expertise is the basis of any BI effort.

Reporting Analysis & Presentation

A successful BI Solution requires consistent and timely reporting to users across the enterprise. B&E utilizes a proprietary BI enterprise reporting methodology that enables us to build custom solutions for all of your information delivery needs. B&E's solution covers the spectrum of BI capabilities--from geospatial representations (e.g. Geographic Information Systems, GIS) to more sophisticated analyses such as clustering and forecasting.

Knowledge Management

B&E brings together BI and associated capabilities to manage enterprise data assets. The complete solution includes building a collaborative environment where the right information flows to the right individual or team at the right time.
